EDUCATION

Florida Agricultural & Mechanical University

Bachelor of Science in Computer Science

Tallahassee, FL, USA

2028

Valencia College

Associate in Arts

Orlando, FL, USA

May 2026

- **GPA & Honors:** 3.5/3.8 ; President's List
- **Relevant Coursework:** Intro to Programming concepts, C Programming, Calculus, Statistical Methods

TECHNICAL SKILLS

Programming Languages: Python, Typescript, Golang, C, Java, Bash

Libraries and Frameworks: Pandas, Flask, OpenCV, Streamlit, ReactJS, React Native, Expo, NextJS

Development Tools: Git, Docker, Figma, Vercel, MongoDB, LaTeX, GitHub Actions, CI/CD

PROJECTS

- **Retrieval Augmented Generation Docs Chat** <https://github.com/steevejoseph/doc-tuah>
Building a production-level RAG application that allows dev teams to chat with their specific docs or for students to chat with their specific textbooks. Built with Fastapi (Python), Azure OpenAI Embeddings, GPT Turbo 3.5, ChromaDB, and Terraform for one-click infrastructure deployment to Microsoft Azure.
- **Financial Data Filtering App** <https://github.com/lonesume/financial-data-filtering-app>
Developed a responsive financial data filtering app for a client using React, TypeScript, TailwindCSS, Python, and FastAPI. Integrated the Financial Modeling Prep API to fetch and display income statements from various companies with features like dynamic filtering (date range, revenue, net income), sorting (date, revenue, net income), and a backend API for server-side filtering. Deployed the app to Vercel with a comprehensive README for setup and usage.
- **SEC BCS Ranking System** <https://github.com/lonesume/SEC.py>
Built a Python ranking engine that analyzes SEC football teams using weighted performance metrics, dictionary-based data structures, sorting algorithms, and user-driven statistical queries.
- **AI Industry Translator** <https://github.com/lonesume/bridge>
Developed a Full-stack SaaS app that translates jargon and expressions across industries and generates explanations using ReactJS, MongoDB, Docker, Python (Flask), and OpenAI's API. Dockerized the app for consistent cloud deployment (Microsoft Azure/AWS/Google Cloud).
- **Soccer Team Linked List System** <https://github.com/lonesume/SoccerTeams>
Built a low-level data management system in C utilizing linked lists, dynamic memory allocation, structs, pointers, and binary file processing for efficient record storage and traversal.

LEADERSHIP

CUST-STEM

Vice-President

Valencia College

2024 – 2026

- Organize STEM-focused workshops, outreach initiatives, and campus engagement events.
- Promote student involvement within Valencia College's STEM community.

Stop The Violence & Embrace Inc.

Youth Leader

Florida, USA

August 2024 – Present

- Mentor inner-city youth through academic tutoring, summer camps, and community activities focused on growth and teamwork.
- Support youth development through safe, structured educational and recreational programs.
